Obtain Insights Into Your Data

MedixSphere® is a multi-engine Al platform that uses data models to generate additional revenue streams

MedixSphere® MVS™ Engine analyzes patient information from EHR databases and provides Gap In Care (GIC), radiology studies, and other preventive & ancillary service recommendations; all based on your practice requirements and while the patient is already in the clinic. It includes pre-defined data models with the ability to add practice specific ones. Customizable models, close some GIC, optional HCC R-Engine, generate new appointments, an increase in revenue and possible incentive payments, MedixSphere® MVS™ is your solution.

The HCC R-Engine, Hierarchical Condition Category, analyzes patient's data and advises practitioner of HCC Dx coding gaps. This optional add-on is included during your free month trial.

With the **Reporting Engine** you will be able to run all the reports we make for you on demand.

- Patient call lists based on MVS™ rule-sets, demographics, diseases, meds, labs, last appointment dates, missing future appointments, etc.
- Billing ad-hoc reporting: If your PM billing reports are overwhelming or not providing what you need, we can create a custom solution.
- Most data mining extracts can be turned into on-demand reports.

Dashboard Engine, graphs and reports in one page. Do you have a custom request? We can make it a reality.

- MVS™ Today is a simple to read dashboard that allows you to forecast your coming days in advance.
- MyPractice Today is a 90-day billing performance recap dashboard. See how many charity visits have been done, which is very useful. It also has revenue brackets between CPT codes.

Don't overwhelm your practice with a new complicated workflow. MVS™ is a simple to use platform. With as few as 3 clicks your report prints.
